DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Miner (6,690,655).

Regarding claims 1, and 5-9, Miner discloses a low-power communication system, comprising: an in-band system providing in-band wireless communication (see abstract, fig.4, elements 212, 403, 215), wherein the in-band system has an active mode and a sleep mode (see fig.4, elements 407, 409 and description); and an out-of-band system providing out-of-band wireless communication (see fig.4, element 405), wherein the out-of-band system is coupled with the in-band system (see fig.4, elements 405, 403), and the out-of-band system receives an out-of-band wireless communication and activates the in-band system causing the in-band system to transition from the sleep mode to the activate mode (see abstract, fig.4, elements 213, 409, 407, col.17, lines 19-47 and description).

Regarding claim 2, Miner further discloses wherein the out-of-band system includes a controller, such that a least a portion of the out-of-band wireless

Application/Control Number: 10/697,366

Art Unit: 2683

communication is directed to the controller and the controller activates the in-band system causing the in-band system to transition from the sleep mode to the activate mode (see fig.3, element 303, and its description).

Regarding claims 3-4, Miner further discloses, wherein the controller further transmits an out-of-band communication (see fig.3, element 303, 213 and its description).

Regarding claim 10-13, Miner discloses a low-power communication system, comprising: an in-band system (see abstract, fig.4, elements 403, 401); and an out-of-band system coupled with the in-band system (see fig.4, elements 405, 403), wherein the out-of-band system activates the in-band system when the out-of-band system wirelessly receives an out-of-band communication, such that the in-band system provides wirelessly in-band communication (see abstract, fig.4, elements 213, 409, 407, col.17, lines 19-47 and description).

Regarding claims 14-20, Miner discloses a low-power communication system, comprising: maintaining an in-band system in a sleep mode (see abstract, fig.4, element 409, and description); receiving a wireless out-of-band communication (see fig.4, elements 213, 405, and description); activating the in-band system in response to the out-of-band communication (see fig.4, elements 213, 405, 409, 407, 403, and description); and transitioning the in-band system from the sleep mode to an active mode (see abstract, fig.4, elements 213, 409, 407, col.17, lines 19-47 and description).
